

Exercise 2: Display numbers from a list using a loop

Write a Python program to display only those numbers from a list that satisfy the following conditions

- The number must be divisible by five
- If the number is greater than 150, then skip it and move to the following number
- If the number is greater than 500, then stop the loop

Given:

```
numbers = [12, 75, 150, 180, 145, 525, 50]
```

Expected output:

75

150

145

Refer: break and continue in Python

Exercise 3: Display Fibonacci series up to 10 terms

Have you ever wondered about the Fibonacci Sequence? It's a series of numbers in which the next number is found by adding up the two numbers before it. The first two numbers are 0 and 1.

For example, 0, 1, 1, 2, 3, 5, 8, 13, 21. The next number in this series is $13 + 21 = 34$.

Expected output:

Fibonacci sequence:

0 1 1 2 3 5 8 13 21 34

Refer: Generate Fibonacci Series in Python

Exercise 4 : Find the factorial of a given number

Write a Python program to use for loop to find the factorial of a given number.

The factorial (symbol: !) means multiplying all numbers from the chosen number down to 1.

For example, a factorial of 5! is $5 \times 4 \times 3 \times 2 \times 1 = 120$

Expected output:

120
