

6 WAYS TO REVERSE A LIST IN PYTHON

1) USING `reversed()` Function - creates an iterator

```
my_list = [10, 15, 20, 25, 30]
reversed_list = list(reversed(my_list))
print(reversed_list)
```

2) USING LIST COMPREHENSION with `reversed()`

```
my_list = [10, 15, 20, 25, 30]
reversed_list = [item for item in reversed(my_list)]
print(reversed_list)
```

3) USING reverse() Method - In-Place

```
my_list = [10, 15, 20, 25, 30]
my_list.reverse()
print(my_list)
```

4) USING slicing - creates a new list

```
my_list = [10, 15, 20, 25, 30]
reversed_list = my_list[::-1]
print(reversed_list)
```

5) USING LOOP

```
my_list = [10, 15, 20, 25, 30]
reversed_list = []
for item in my_list:
    reversed_list.insert(0, item)
print(reversed_list)
```

6) USING RECURSION

```
def reverse_list(lst):
    if len(lst) == 0:
        return []
    else:
        return [lst[-1]] + reverse_list(lst[:-1])

my_list = [10, 15, 20, 25, 30]
reversed_list = reverse_list(my_list)
print(reversed_list)
```
